MARK JOSEPH H. REMEDIO

SENIOR SOFTWARE ENGINEER

CONTACT

mackhoy.dev@gmail.com

+63 9267318065

EDUCATIONAL BACKGROUND

Tertiary:
B.S In Information Technology
University of San Carlos

Secondary:
University of San Carlos

Primary:
Colegio de la Inmaculada Concepción, Cebu City

SKILLS

Programming & Frameworks:
Java (Spring, JPA, Hibernate), Node.js (NestJS), PHP (Laravel), TypeScript, React (Next.js), Vue.js, jQuery, HTML5, CSS (Bootstrap)

Databases & Storage:
MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, Firebase Realtime Database

Cloud & Deployment:
AWS, GCP, Heroku, Docker, Ansible, Nginx

CI/CD & DevOps:
Jenkins, GitHub Actions

Testing & Automation:
Selenium, Playwright, JMeter

EXPERIENCE

Direct Sourcing Solutions – Senior Software Engineer

July 2025 – Present

Docuvera – Node.js, Lambda, AWS CDK, API Gateway, Step Functions, Claude, BMAD

- Optimize code so that lambda function would not exceed the 15minutes time limit of step functions.
- Start building agentic workflow using claude.ai and BMAD method to add new features.
- Build new nodejs lambda functions and deploy it with AWS CDK
- Work on integration services that connects 3rd party api and our core api for enhance product features

Umpisa Inc. – Senior Engineer

Mar 2024 – July 2025

Cox Communications – Spring Boot, ActiveMQ, Node.js, AWS Lambda, QA, Playwright

- Migrated legacy systems into modern Spring Boot microservices and Node.js AWS Lambda architecture.
- Implemented unit testing standards (JUnit & Jest) achieving minimum 75% code coverage for new features.
- Transition to QA for quite sometime to help in testing so we can be on track with the release schedule. After release initiated the building of automation test.

Wombat – React.js, Node.js, Playwright

- Built end-to-end test automation framework from scratch using Playwright, improving regression reliability.
- Resolved frontend and backend defects while contributing to feature stability and production readiness.

Rendition Digital – Senior Java Engineer

Jan 2023 – Mar 2024

Datalex – Spring Boot, MongoDB, Microservices

- Resolved high-priority production issues and delivered new backend features within microservice architecture.
- Mentored junior developers and supported QA during testing cycles to ensure release quality.
- Assisted in frontend bug fixes leveraging prior JavaScript experience.

Fullspeed Technologies Inc. – Team Lead

May 2017 – Jan 2023

MicoWorks

Spring Boot, TypeScript, NestJS, Next.js, DynamoDB, Redis, Redshift, AWS

- Contributed to system architecture design and enforced coding standards through structured PR reviews.
- Led technical meetings, client demos, and onboarding of new engineers into team processes.

PolymorphicAds / Xrost

Spring Boot, Spring Batch, Docker, Jenkins, Go, Vuejs, AWS, Microservices,

- Dockerized microservices-based test environments, improving development consistency across team members.
- Initiate automation of bi-monthly AWS EC2 server maintenance processes.
- Created POC to migrate old J2EE and Jquery to new technologies.

Admatrix

Spring Batch, Google API, Jenkins, Docker, Ansible, Laravel

- Automated daily maintenance workflows using Spring Batch and Google APIs, reducing manual operations.
- Established CI pipelines and containerized local development environments using Docker.
- Implemented monitoring via Datadog custom configurations and supported Laravel-based applications.

Accenture Inc – Associate Application Developer

Feb 2015 – May 2017

Worked on enterprise systems across multiple client engagements.

- Delivered production support, feature enhancements, and performance improvements for Java-based systems.
- Developed and integrated Jasper Reports (JRXML) and automated load testing using JMeter.
- Created technical designs from functional specifications and resolved SIT/UAT defects.
- Mentored junior team members during onboarding and early project phases.

Tieto Global Oy – Software Development Engineer

May 2014 – Feb 2015

- Contributed to OSS platform integrations for Nokia NetAct systems using Python and Bash.
- Performed sanity and integration testing for newly deployed telecom components.

University of San Carlos – On-the-Job Trainee

Apr 2013 – Jul 2013

- Contributed to development and deployment of Room Management and Asset Monitoring System using C#, PHP, and MySQL.

FREELANCE PROJECTS

CimaGrowth

Tech: Node.js, TypeScript, AWS SAM, AWS Cloudformation N8N, GHL

- Architected and deployed a serverless API integrating GoHighLevel with external systems using AWS Lambda.
- Led technical discussions with third-party developers and executives to translate business requirements into scalable integration solutions.
- Create n8n automation workflows for some specific endpoint that are not complicated

Zappysales

Tech: Selenium, Playwright, QA

- Developed automated test scripts using Selenium to improve regression testing efficiency andcoverage.
- Automate update of prices and stock of our products by using playwright by scraping into ourpartner companies website while they don't have api/jobs to send us the updated price and stock.
- As part of QA team, we perform L1 support investigations on reported issues .

Integrated Infrastructure Solutions Corporation

SpeedRegalo – Laravel

- Implemented new e-commerce features and resolved production issues to improve system stability and user experience.
- Collaborated closely with QA testers and product owner to ensure high-quality releases.

Harmonized Online Freight Forwarding Accreditation – Laravel, Vue.js

- Contributed to full-stack development of the platform from scratch, implementing backend APIs and frontend components.
- Participated in database design and core business logic implementation.

Tokhimo

Uniplat Social Admin – Spring Boot, Vue.js, Nginx

- Built and deployed the admin web application from scratch, developing REST APIs and frontend dashboard components.
- Configured and managed production deployment using Nginx, ensuring application availability and performance.

iVolunteer Philippines

Tech: Laravel

- Gathered feature requirements directly from the CEO and independently delivered urgent production enhancements.
- Designed database updates and performed integration testing to ensure reliable deployments.

Concept Machine

Cloudeats – Spring Boot, AWS EC2, React (Next.js)

- Architected and deployed the backend ordering system on AWS EC2, ensuring production readiness.
- Supported frontend integration and resolved issues during system testing to ensure API reliability.

Tudlo Innovation Solutions Inc

Boardwalk – Laravel, Parse Platform, Firebase

- Sole full-stack developer responsible for building and maintaining the admin system.
- Integrated Firebase services and implemented backend logic to support real-time features.
